

BUILDING PERFORMANCE STANDARDS (BPS)

WHAT ARE BPS?

BPS regulations set energy and emissions targets for existing buildings and are enforced by states or local governments. Benchmarking has typically already been completed and BPS often requires energy audits or other assessments to provide measures that can be implemented to bring the property into compliance. Failure to comply often results in substantial fines and/or other penalties such as a lien.

EXISTING PROGRAMS & REQUIREMENTS

More states and cities are adopting BPS rules. The IMT map shows where they've passed or are in development. Below are brief summaries of current regulations.
